PREVENTATIVE MAINTENANCE

Setting the standard in integrity and quality

In order to provide good reliable service, you must be pro-active. To prevent unplanned disruptions, a good maintenance program is invaluable.

Campbell and Kennedy have been providing preventative maintenance for over 50 years. Experience, training, an understanding of all systems, proper execution and a historical database are at the heart of preventive maintenance. Our auditing system helps design the right client program while allowing for maintenance budgeting and noting the history of repairs and changes. We're the source for all your maintenance requirements including scheduling and coordination of all electrical system disciplines.

Our maintenance program includes infra-red technology, harmonics and power quality evaluation, high voltage maintenance, fuse protection and breaker maintenance, coordination study, downstream systems protection, emergency backup systems maintenance and all low voltage distribution devices.

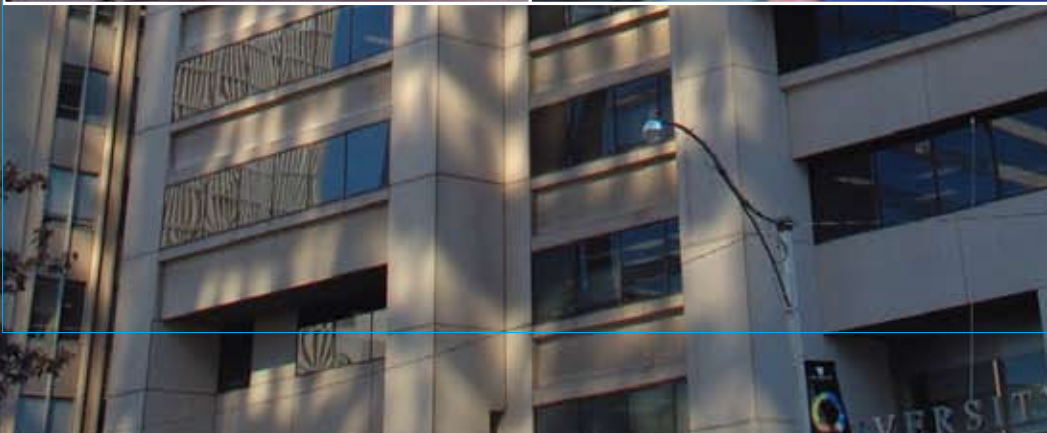

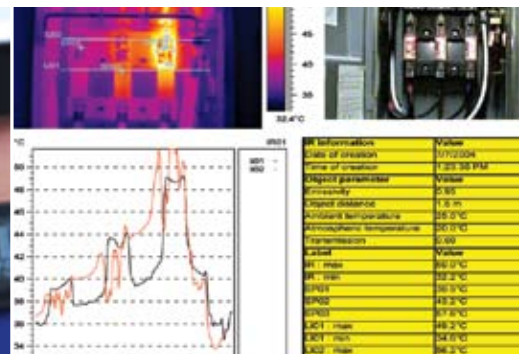

What we Do

- Hands-on Maintenance
- High voltage Maintenance
- Power Quality
- Emergency Systems
- Energy Management

- Preventive Maintenance Planning
- Budgeting and Scheduling
- System Audit and Update
- Infra-red Scanning
- Hands-on Maintenance

Where we Do it

- Commercial Office Buildings
- Industrial & Commercial
- Computer Rooms
- Institutional
- Tenant Office Space
